

EVOLVING LIVING SOLUTIONS

"No problem can ever be solved from the same level of consciousness that created it." Albert Einstein

Vision

BioCity's purpose is to create a platform from which new possibilities of living in harmony are continually born; possibilities that give cause to life, celebrating the abundance of its qualities such as; vibrant food, amazing shelter, radiant health, clean air, pristine water, nature, silence, beauty, arts, fun, human contact and the time to enjoy it.

In a world faced with huge environmental, social and financial hurdles BioCity aims to find solutions, which help people to prosper while being sustainable and less of a burden on existing social and financial structures. The solutions created will be available for the benefit of all within and beyond the communities.

The intention is to develop five 'cities' one on each of five continents. Each city is an integrated package of 'evolutionary living' solutions. The cities are designed to expand incrementally so that millions of inhabitants will be supported through such cities. They will become models for other 'communities' to form and/or adopt similar ideas, technologies and principles, bridging the gap between regular town and city planning and small to medium scale eco-developments.

The foundation of the new 'city' concept will entail the best practices available for living a zero-emissions existence, enhancing biodiversity and ensuring the cities and inhabitants are self-sufficient and in harmony with nature and one another.

It requires a blend of high technology, ancient knowledge and strategic thinking to create a haven for personal and shared growth and a model for

society to arrange itself into organised, self-sustainable, interconnected and strong multi-cultural communities.

Inhabitants will agree upon and share common values and guiding principles. These will have their roots in such areas as; ethics, ecology, sustainability, agriculture, education, life and death awareness, spirituality, arts, events and culture. Having fun will be of significant value. These topics and others will be used as markers to produce the communities' 'happiness index'.

Through such a platform a scenario can be developed for the City, State and Country. It can happen and happen quickly.

Status

BioCity has a vision and plan for the development of such 'authenticities'.

The blue-prints and evolving plans will most likely be developed through and held by a trust. Established by BioCity, this will be created to support the evolutionary city project, host brainstorming sessions bringing together a 'cutting edge' team with a wide range of expertise to continuously refine the plans.

These plans and the relevant know-how, methods, technologies, systems and solutions developed will be used in the development of the BioCities. They will also be available to governments, city developers and communities for use in new developments, or adapted to existing cities or communities and to solve the challenges faced by increasing urbanization.

Concurrently, a legal charter is being developed for the cities and guidelines will be provided for inhabitants to ensure a common harmonious vision is agreed upon and upheld.

Initially, there are 5 main stages, some highlights from these are as follows:

1. brainstorming session selecting the core teams, working with specialists and advisors
2. development of the schematic master vision, website and animation
3. presentations and negotiations with host nations, governments and

indigenous leaders

4. site selection, environmental impact assessment etc

5. adaptation of plans to land, planting, building of infrastructure etc

BioCity is reviewing different options for 'financing' the initial development costs including the core teams brainstorming sessions and development of the website. Thereafter a detailed road map and financial requirements will be provided for the next stage.
